SUMMARY

AI & Data Science undergraduate with hands-on experience building LLM-powered voice agents, RAG pipelines, and ML classification models. Interned at two tech firms delivering production-grade automation and chatbot solutions. Actively documenting a "10 Models in 10 Days" public ML challenge on LinkedIn, covering NLP, tabular, and image classification domains.

WORK EXPERIENCE

AI/ML Engineer Intern, Hexite Technologies Pvt Ltd

Jan 2026 - Mar 2026

- Engineered 3+ AI-powered voice agents and chatbots using LLM and RAG architectures for domain-specific conversational applications.
- Built Email and WhatsApp automation workflows, cutting manual customer communication effort by an estimated 40–60%.
- Led data migration tasks during CRM transition from .NET to Java, ensuring database integrity across MSSQL environments.

Python Full-Stack Intern, Femtosoft Technologies

May 2025 - Jun 2025

- Developed and shipped 5+ web application modules across the full stack (Python, HTML/CSS, JavaScript, SQL), improving feature coverage and user workflows.
 - Implemented database-driven backend functionality and business logic for dynamic web applications.
-

SKILLS

- Programming Languages:** Python, Java
 - AI/ML:** Machine Learning, LLM Applications, RAG, NLP, YOLO, Whisper, OCR
 - Data Visualization & BI:** Power BI, Matplotlib, Seaborn
 - Databases:** MySQL, MSSQL, MongoDB, SQLite
 - Web Development:** HTML, CSS, JavaScript
 - Tools & Frameworks:** Flask, Streamlit, Jupyter, Git
-

EDUCATION

Bachelor of Technology in Artificial Intelligence and Data Science | CGPA - 8.04 2022- 2026
S.A. Engineering College

PROJECTS

10 Models in 10 Days – Public ML Series [LinkedIn](#)

Ongoing

- Independently building and publicly documenting 10 classification models across NLP, tabular, and image domains over 10 consecutive days.
- Models include Logistic Regression (churn prediction), Gaussian Naive Bayes (spam detection), and more — each with full write-ups shared on LinkedIn.

Smart E-Cart System [GitHub](#) | Python, YOLO, Whisper, OCR, Machine Learning

- Developed a multimodal AI system that extracts ingredients from cooking videos using video, audio, and text analysis, and converts them into structured shopping lists for e-commerce integration.
- Integrated YOLO for object detection, Whisper for speech-to-text conversion, and OCR for text extraction from video frames.
- Automated ingredient identification and processing by combining insights from multiple data sources.
